

# Asset Groups, Types, and Asset Codes for ISIS

The Information Services Inventory System (ISIS) database is structured into three levels; namely Asset Group, Asset Type and Asset Code. There are currently **six** Asset Groups within the IT Inventory application; namely, 1) End User Device, 2) Mainframe, 3) Minicomputer, 4) Server, 5) Software and 6) Telecommunications.

Each Group supports different Asset Types such as Laptop's, Personal Computers, PDA's, etc. Within each Asset Type, there are specific related Asset Codes (or product names) as defined and deployed by state agencies. If an Asset Code is not identified in the list below for your products, please call Please contact the IT Planning Manager at (602)364-4790 or email to [ITplanning@azgita.gov](mailto:ITplanning@azgita.gov) and GITA will update the Asset Code table and manufacturer, if needed.

## Asset Groups, Asset Types, Asset Codes & Descriptions

(IO) End User Device	(IO) End User Device	(IO) End User Device
